Tubeless Sustainability

PAPER IS A TRULY RENEWABLE AND SUSTAINABLE RESOURCE.

Even so we constantly review our manufacturing processes and practices to make sure we minimise our environmental impact while carrying out our day to day business.

Tubeless Rolls

Our Tubeless range paper hand towels and toilet tissue are manufactured using the best environmental practices. By removing the inner tube from all Tubeless paper roll products hundreds of tons of waste have been cut during the manufacturing process and there is no waste at the end of the roll. Tubeless gives 100% usable paper product and has more paper in each roll.

Bio-Based and Fully Recyclable Packaging

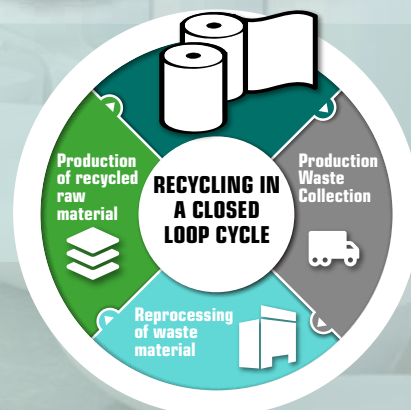

I'm green Polyethylene biopolymer is made from renewable resources that make a significant contribution to reducing the level of greenhouse gas emissions. Green Polyethylene made from sugar cane is a renewable alternative to Polyethylene, a thermoplastic resin largely used for packaging in consumer products industries.

Recovered & Recycled Raw Materials

Many of our paper products are made of cellulose, that would otherwise end up on landfill. The production of cellulose itself is eco-friendly, as it's recovered without using damaging substances and processes. Paper is produced without cutting down trees, and the quality of unbleached cellulose is comparable to virgin wood fibres so there's no loss of quality.

- Any waste material from our production process is sent to a paper mill to be reprocessed into raw material which we buy back to make into more paper products

Dispensers

From small executive washrooms to busy, large washrooms with a high volume of visitors and users, the Tubeless for More coordinated dispensers offer a complete washroom hygiene solution that's more efficient, more environmental and more appealing to washroom users. There are two attractive modern styles to choose from

Tubeless dispensers are

- Designed to be easy to replenish and maintain
- Resistant to marks and easy to clean
- Modern with attractive contoured lines for a stylish appearance

ICE BLUE cool & sophisticated

The fresh Ice Blue washroom hygiene product range will enhance your washroom. The dispensers are attractive yet practical, matt finished with transparent highlights designed to make it easy to see when refills are low without opening the dispenser.

EXECUTIVE BLACK a touch of luxury

If image and reputation are important to you, the Executive Black washroom hygiene product range will make your restrooms stand out. The dispensers are matt black with an attractive textured finish.

Paper Range & Technology

Compact Technology

Compact technology gives more product per pack and case, reducing waste, storage space and transport costs. Compact products reduce your carbon footprint and are better for the environment.

No Waste – Better for the Environment

Turning Tubeless means that 100% of the product is used by the washroom user. On average 1.98% of each roll is disposed of as waste when the cardboard tube is discarded. With Tubeless paper products the tube is replaced with more towel or tissue for everyday use.

Embossing Technology

Tubeless embossing technology has a larger embossing surface with smaller, more precise gluing dots giving better absorption and a premium quality feel.

Choice of paper quality

100% Pulp for high quality absorbency, wet strength and value.

Recycled for best environmental footprint.

Recycled from waste such as office paper and corrugated cardboard for best environmental footprint.

Tubeless Hand Towels and Toilet Tissues are EU Ecolabel approved

Ecolabel – the EU Ecolabel is a label of environmental excellence that is awarded to products meeting high environmental standards throughout their life-cycle: from raw material extraction, to production, distribution and disposal.

FSC® – Products carrying the Forest Stewardship Council® (FSC – C115896) label are independently certified, giving assurance they are made from or contain wood that comes from FSC® certified forests.

ISO14001 – your guarantee that DELT Papir has implemented an environmental management system at our manufacturing sites and proves our commitment to prevent pollution across all aspects of our business activities, products and services.

Dermatologically tested - all our hand towels and toilet tissues have been independently dermatologically tested

HYGIENE EYE

Smart hygiene system

Start working smart

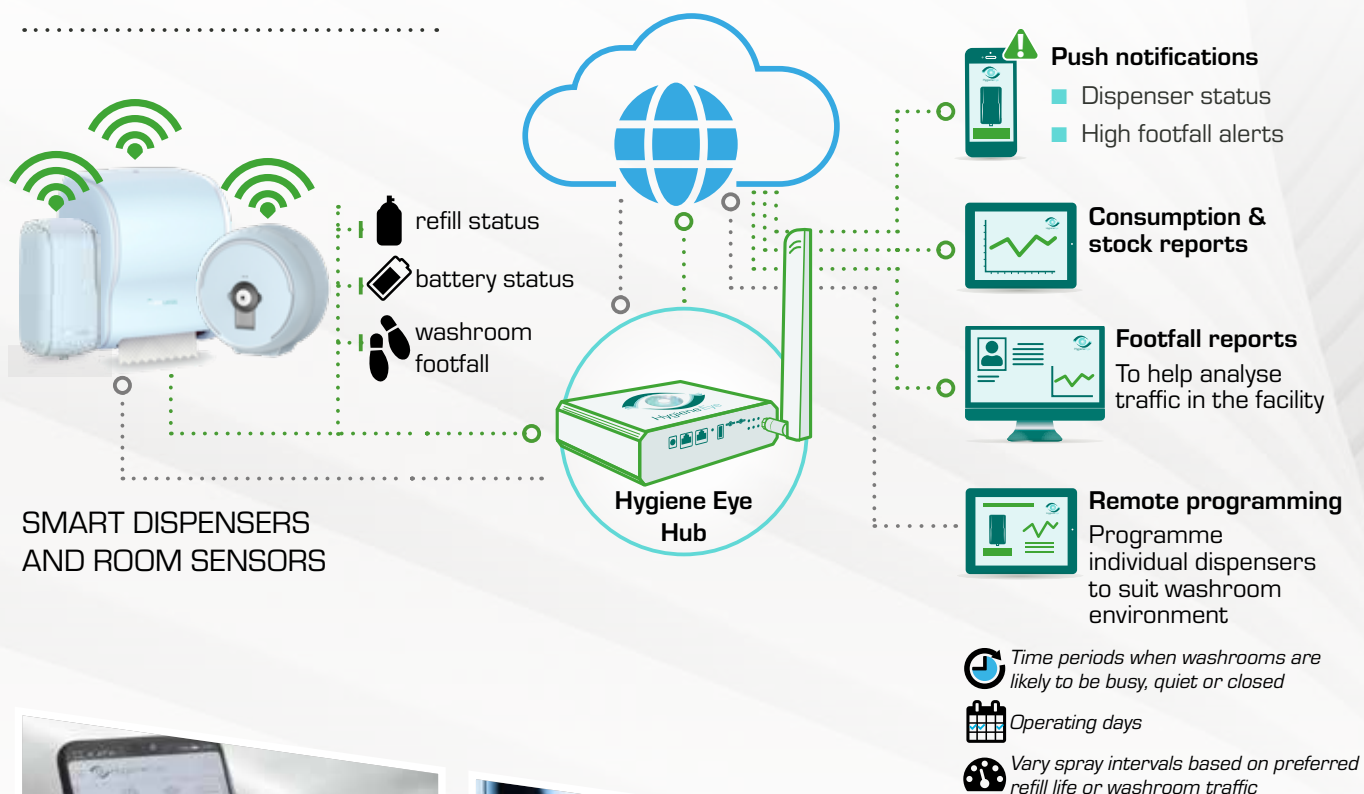

How to keep washrooms clean in a smart way

Keeping washrooms clean, fresh and hygienic continuously is an almost impossible task.

Some buildings are open 24 hours, 7 days a week, others may close on certain days or periods during the year, so installing programmable hygiene and air freshening systems makes perfect sense. Even then the systems may be limited in their programming flexibility, so that product is used when it isn't needed, or isn't available when it is needed!

Hygiene Eye is a smart technology that controls, monitors and manages individual hygiene systems in washrooms while cutting waste, cost and inefficiency.

HOW HYGIENE EYE WORKS

Monitor

Remotely monitor product usage and get notified when each dispenser is low on refill or power

Control

Real-time monitoring of footfall helps ensure clean washrooms and dispensers are well stocked and ready to use

Manage

Cost efficiency management is the key – reduce waste, improve efficiency and ensure a high level of customer satisfaction

Hygiene Eye gives extra control and optimises the dispensing system to give maximum value

Key benefits of using Hygiene Eye smart technology

- 1 Ensures Tubeless automatic washroom dispensers never run out and product is always available for continuous use
- 2 Controls usage so that product is never wasted, saving money and the environment
- 3 Controlled programming optimises each unit to create a bespoke washroom environment that is right for the user and manager
- 4 Captive system: option of remotely locking and controlling dispensers

HYGIENE EYE DISPENSER RANGE

Hygiene Eye dispensers are available in Ice Blue and Executive Black washroom hygiene product ranges.
